

ARANAPLAST

TRADING COMPANY

ABOUT US:

Arana Plast

Arana Plast Company, with over a decade of experience in the plastic industry, is recognized as one of the leading manufacturers and suppliers of various packaging plastics. Utilizing modern technologies and the best raw materials, the company offers high-quality products in various packaging sectors. The main activities of Arana Plast include the production and distribution of nylon, cellophane, shrink wraps, stretch films, and heat shrink plastics.

Additionally, Arana Plast is recognized as one of the pioneers in the production of plastic pots in Iran. Arana Plast, using advanced technologies and high-quality raw materials, produces plastic pots in various sizes and designs to meet the different needs of users in the best possible way. Arana Plast's plastic pots are an ideal option for gardeners, greenhouses, and houseplant enthusiasts. Whether for indoor or outdoor use, Arana Plast pots, with their modern designs and superior functionality, help you create a more beautiful and organized green space.

Nylon

Arana Plast's nylon products are polyethylene-based and have specific features such as high resistance to tearing and stretching, making them widely applicable in packaging both food and non-food products. These nylons, due to their flexibility and transparency, are highly suitable for protecting goods and maintaining their freshness.

Cellophane

Arana Plast's cellophanes are made from polypropylene. These types of cellophanes, with their high transparency and good resistance to moisture and chemicals, are suitable for packaging products such as food, pharmaceuticals, and consumer goods. Moreover, due to their aesthetic appeal and glossiness, cellophanes are also used as an attractive option for luxury packaging and gifts.

Shrink Wraps

Arana Plast's heat shrink wraps, made from polyethylene, easily shrink around various products with the application of heat, providing a strong and secure packaging. This type of packaging ensures protection against dust, moisture, and mechanical damage, making it highly efficient for industrial and commercial product packaging.

Stretch Film

Arana Plast's stretch films, specifically designed for wrapping and palletizing goods, have high elasticity. This feature allows goods to be tightly and securely wrapped on pallets, preventing movement or damage. This type of packaging is highly practical for warehousing and transportation.

Heat Shrink Plastic

Arana Plast's heat shrink plastic, made from polyethylene, is stretched around products using heat and forms its final shape after cooling. This product is ideal for custom packaging and protecting products against environmental conditions.

Plastic Pots

Arana Plast Company also manufactures plastic pots in both small and large sizes. These pots are suitable for gardening and planting flowers and plants. Due to their high durability and water retention capability, they are an excellent choice for greenhouses and gardeners.
